Professor of Geological Engineering at Chang'an University, China. He had ever been Head of the Department of Geological Engineering and Vice-dean of the School of Geological Engineering and Geomatics. He has been involved in geological research, consulting and education for more than 25 years. He is the author or co-author of more than 200 scientific papers and published the books 《Landslide Disaster Mitigation in Three Gorges Reservoir, China》 and 《Progress of Geo-Disaster Mitigation Technology in Asia}. He sits in the Editorial Board of Geo-environmental Disasters. He is Secretary General of International Consortium on Geo-disaster Reduction. He has consulted for many key projects of urban buildings, highways, hydro-power stations, oil-gas transfer lines and nuclear electric plants in China. His research interests are focused on unsaturated soil mechanics, geo-environment and geo-disaster. In recent years, he has achieved three National Natural Science Funds and a National Basic Research Program which are related to the unsaturated loess permeability and loess geo-disasters.

Professor Wan-kui Ni is three-level Professor and doctoral supervisor in Department of Geological Engineering, Chang’ An University. He was born from Guyuan City, Ningxia Hui Autonomous Region in November 1965. Prof. Ni had received his PhD degree from Geological Engineering in 1999 at Xi’ an College of Engineering and then carried out post-doctoral research at School of Civil Engineering, Chongqing University from 2000 to 2003. At present, he is the director of the Institute of Geomechanics and Engineering, Chang’ An University and a National Registered Civil Engineer (Geotechnical). His research interests mainly cover environmental engineering geology and special soil mechanics and engineering, including geo-environmental assessment of cities and major projects, evaluation and

prevention of geological disasters, mechanical properties of loess, mechanical properties of frozen soil, evaluation of Freeze-thaw disaster, design and protection of loess slope, etc. In recent years, prof. Ni has presided over a number of national projects, such as the key project of the National Science Foundation of China, the National Science Foundation of China, sub-project from National Program on Key Basic Research Project (973 Program), National Science and Technology Infrastructure Program, Key Science and Technology Program of Shaanxi Province, Science and technology innovation projects of Shaanxi Province, Major Scientific and Technological Research Project of Western Transport Construction by the Ministry of Communications, etc. He has published more than 40 academic papers in core academic journals and co-authored six books. Prof. Ni has won lots of the provincial and ministerial science and technological progress award, including 2 first prizes, 3 second prizes and 3 third prizes. He has obtained 1 “Teaching achievements special prize of Shaanxi Province”. He also has been successively awarded 4 honorary titles: “Outstanding Teacher of Chang’An University” and “Advanced individuals in scientific and technological work”.

Runyong Ma, Professor of the Department of Geological Engineering and Geomatics, supervisor/director of master study, with main research fields of engineering geology and geological disasters.

Ma participated in a number of national, provincial and ministerial level key projects.

Ma served as the chief investigator and completed or implemented the projects:

“Identification of fault activity in Baoji” (2011)、“Study on the relationship between deep structures and earthquakes in Xi'an and its adjacent areas” (2012)、“Engineering geological survey and numerical simulation of tectonic stress field of active faults in typical ground fissure developed area of North China Plain” (2012) and “Study on the formation mechanism of ground fissures caused by deep tectonic activity in North China Plain” (2015), et. al.

Ma participated as the leading investigator in the projects: “Study on fault resistance of Daliushu dam in Heishan Gorge, the Yellow River” (2003), “Study on the stability of No. 1 landslide in Gangkou slope of diversion tunnel of Heihe water control project” (2004) “, Ground subsidence monitoring and prevention of ground fissures in typical areas of Fenwei Basin” (2007), “Fine detection, quantitative evaluation and Prevention Countermeasures of active faults and ground fissures in

Highway Engineering”(2008), “Research and development of comprehensive utilization of fly ash in Zhungeer mining area” (2008) and “Study on technology of extracting alumina and silicic acid from fly ash’ (2014), et. al.

Ma won the first prize of science and technology progress in Shaanxi Province (07-1-28-r2), published more than 30 scientific papers, Obtained more than 10 national authorized invention patent and being the co-author of 3 monographs.
